SUMMARY

Computer Science graduate focused on applications, structured data and practical AI-enabled workflows. Builds with Flutter, React, TypeScript, Node.js and SQL, with project work covering authenticated applications, relational data, role-based access and grounded guidance flows. Current database-support work includes data checks, record updates, access troubleshooting and recurring reports.

EDUCATION

Bachelor of Science in Computer Science

Umm Al-Qura University | Makkah, Saudi Arabia | Graduation: 23 August 2026

EXPERIENCE

Database Support Technician

Safa Al Reef Blacksmithing Establishment | Makkah | March 2025 - Present

- Review and update business records, resolve data-entry and access issues, and prepare recurring reports for daily use.
- Document recurring issues and assist with routine updates and backups.

IT Cooperative Trainee (600 Hours)

Deanship of Technology and Development, Umm Al-Qura University | Makkah | March 2025 - June 2025

- Handled user support and routine IT troubleshooting; assisted internal digital-service development and deployment tasks.

PROJECTS

Dhaker - Smart Hajj & Umrah Companion | Graduation Project

Technologies: Flutter, Firebase, Cloudflare Workers

- Problem: Users need reliable Arabic-first guidance with controlled access to structured content.
- Contribution: Built mobile and web workflows with authentication, Firestore data, server-side requests and grounded guidance flows.
- Result: Project testing recorded over 95% location accuracy across the tested location workflow.

Mirfaq - Property Maintenance Platform | Full-Stack Project

Technologies: React, TypeScript, Node.js, Prisma, PostgreSQL

- Problem: Operational service data needs clear ownership, access control and reliable status changes.
- Contribution: Built role-based request, assignment, completion and reporting workflows for residents, technicians and managers.
- Result: Implemented relational data models, RBAC, notifications and automated tests for core workflows.

Waqfa - Purchase Decision Tool | Flutter Prototype

Technologies: Flutter, Dart, Groq API

- Problem: Users need understandable outputs from structured financial scenarios.
- Contribution: Built a 90-day cash-flow calculation with income and expense inputs.
- Result: Separated deterministic calculations from API explanations so outputs remain traceable.

SKILLS

- Application Development: Flutter, React, TypeScript, JavaScript, Node.js, Dart
- Data & APIs: SQL, PostgreSQL, SQLite, Firebase, Firestore, Prisma, REST APIs, relational data modelling
- AI Application Work: grounded guidance flows, context handling, Groq API, server-side requests
- Engineering: authentication, RBAC, automated testing, Git, GitHub Actions, technical documentation

CERTIFICATIONS & COURSES

- Cisco Networking Academy: Introduction to Data Science; Network Technician Career Path; Network Support and Security; Networking Basics; Introduction to Cybersecurity.
- SDAIA (2025): AI Fundamentals; AI Concepts and Advanced Applications.

LANGUAGES

- Arabic: Native
- English: Advanced
